Homeporting of Additional Surface Ships at Naval Station Mayport

Environmental Impact Statement for Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, Florida

The Navy's proposed action being evaluated in the Environmental Impact Statement (EIS) is to homeport additional Atlantic Fleet surface ships at Naval Station Mayport, Florida. The Navy's Environmental Impact Statement will review and assess alternatives for the proposed homeporting of additional surface ships including: cruisers, destroyers, frigates, amphibious assault ships, amphibious transport dock ships, dock landing ships, and/or a nuclear-powered aircraft carrier.

The purpose of this scoping meeting is to inform you of the proposed action, explain the National Environmental Policy Act (NEPA) and the associated environmental impact analysis, and to solicit your input and concerns related to the scope of the EIS.

Navy representatives are here to explain the proposed action and alternatives, answer any questions you might have about these items, and describe the environmental impact analysis process and related time line. An area has also been set aside within the main meeting room to allow you the opportunity to write and submit your comments.
